

Weekly Data Viz Report #3

Zhizhou Xu

data url: <https://ourworldindata.org/explorers/air-pollution>

This data viz shows the emission of 7 different air pollutants from 5 major countries. As we can see, the pollution made from China and India, two of the most significant developing countries, grows rapidly in recent decades. The pollution made by developed countries has been decreasing in recent decades and some pollutants such as NO_x, SO_x and CO from China has also started decreasing due to the raise of awareness of environmental protection.
