

Weekly Data Viz Report #5

Zhizhou Xu

Data url: <https://ourworldindata.org/data-review-air-pollution-deaths>

This data viz shows the deaths of the world caused by the air pollution from fossil fuels in 2015. As we can see from the map, deaths from Asia, especially from China and India are much more

than the average deaths from the rest of the world. Probably it is because the large population of China and India, and the undeveloped industries may cause more toxic pollutions than those more developed industries in developed countries.
